MARKETING APP TEAM GUIDE

Start here

As of 15 October 2026

The app runs one monthly loop: it learns the brand, researches the market, plans the posts, makes the pictures and captions, publishes them, and measures what worked. This part shows that loop; each part after it explains one area of the app.

The main cycle

Research and the learned rules feed each new plan; the plan becomes pictures, captions and booked posts; their results become next month's rules. The Brand Brain sits under all of it.

The cycle, step by step

You do six things a month; the app does the rest. Each step names its page in the sidebar and the part of this guide that explains it.

1. **Keep the Brand Brain up to date** (Brand Brain). Everything the AI writes or draws reads it first: who we are, the tone, products, photos, rules. Update it when something about the company changes. See part 1 · Brand Brain.
2. **Read the research** (Research). Every Monday at 06:00 (KSA) the research agent reads the market: leads and tenders, competitors, events, news, our website and our channels. It writes a report with priorities and content ideas. You can also press Run research at any time. See part 2 · Research.
3. **Plan the month** (Content Planning). Pick the month, add the posts you already know you want, and let the AI suggest more. It uses the Brand Brain, the latest research, past posts and the learned rules. Approve or reject each idea. See part 3 · Content Planning.
4. **Give each post a picture** (Content Planning, then Creative Studio if needed). Pick a photo from the Brand Brain, upload one, or make one in the Creative Studio. See part 4 · Creative Studio and Media

Library.

5. **Pick the captions and save** (Content Planning). The AI writes three captions from each picture; you pick one and check the date and time. Saving the plan books every post automatically on Instagram and LinkedIn. There is no second approval step. See part 5 · Publishing and Social.
6. **Check the queue and the numbers** (Post Queue, Schedule, Analytics). The Post Queue shows anything that failed or still needs a time. Analytics shows how posts did. See part 6 · Analytics.

Then the loop closes. The app records which ideas you approved, rejected or rewrote, and how published posts performed. Under Research → What we learned it proposes short rules (for example, "do not open captions with a question"). Once you approve a rule, it shapes every plan and caption that follows.

Where everything is

Every page in the sidebar, in sidebar order. Leads, Targets and Agent Brief are for the sales team and admins and are not covered here.

Sidebar page	What it is for	Explained in
Dashboard	Today's numbers, posts that need you, and the latest research	8 · Dashboard, Assistant and Settings
Brand Brain	Everything the AI knows about the company	1 · Brand Brain
Creative Studio	Make and edit pictures, videos and reels with AI	4 · Creative Studio and Media Library
Content Planning	Plan a month of posts: ideas, pictures, captions	3 · Content Planning
Schedule	The calendar of booked posts; drag to move them	5 · Publishing and Social
Email Flows	Newsletters, outreach emails, contacts and groups	7 · Email Flows
Social Media	Connect accounts; one page per platform with its posts and numbers	5 · Publishing and Social
Post Queue	Every post: what needs you, what is next, what went out	5 · Publishing and Social
Auto-replies	Automatic replies when someone comments a chosen word on Instagram	5 · Publishing and Social
Analytics	How each account and post did, the website, and a printable report	6 · Analytics
Assistant	Ask questions about this brand's data in plain words	8 · Dashboard, Assistant and Settings
Research	The weekly market report and What we learned	2 · Research
Media Library	Every image, video and document in the company	4 · Creative Studio and Media Library

Sidebar page	What it is for	Explained in
Settings	Add, rename, switch or delete companies	8 · Dashboard, Assistant and Settings
Team & Access	Who can sign in and which companies they see	8 · Dashboard, Assistant and Settings

One rule for every page: the app works per company. The company name at the top of the sidebar decides whose Brand Brain, posts and numbers you see. Switch it there.

MARKETING APP TEAM GUIDE

Brand Brain

As of 15 October 2026

The Brand Brain is the one place the AI learns about the company. Every plan, caption, picture, video, email draft and research run reads it first, so a gap here shows up everywhere. Each company has its own.

What it holds (Arak Lighting example)

The section list is different for each company. Arak's looks like this:

Section	What goes in
Identity & Voice	Who we are, what we sell, how we sound
Guardrails	Words, claims and topics the AI must never use
Audience	Who we are talking to (architects, consultants, contractors)
Market & References	The market we work in and brands we admire
Visual	Colours, look and feel for pictures
Knowledge Centre	Facts the AI can quote: certifications, projects, specs
Asset Library	Logos, product photos, project photos, references, music
Products	One row per product line
Message Templates	Ready-made replies and messages
Suppliers	The brands we carry (keep in step with the website)

Fields sections are text boxes. Directory sections (Products, Suppliers) are lists with a row per item and **+ Add** to add one.

Filling it in

1. Type into any box. The dot beside each label turns solid when it has text; the count on each section (for example 4/6) shows how many are filled.
2. Long text: click the expand icon to edit full screen.
3. Press **Save** at the bottom of the page. "Unsaved changes" shows until you do. Directory rows save on their own.
4. A box marked **NOT SENT TO AI** is a team note only; the AI never sees it (prices are kept this way).

At the bottom, **Preview the brand instructions** shows exactly the text the AI receives.

Asset Library

Upload files by dropping them in or clicking upload. First choose what they are: Product Photo, Project Photo, Logo, Reference, Music or Other.

- Give each file a title, a caption and tags. The caption tells the AI what is in the photo.
- **Project photos** can be grouped by project (for example "Riyadh Air"). Use **Create new project group**, then open a group to add photos or flip through them.
- The logo you upload here is the one the Studio editor offers under "Your logo".
- These are the photos offered when you give a planned post a picture.

Rules (Learned guidance)

Short one-sentence rules added to every matching generation, on top of the fields. Example: "Do not open captions with a rhetorical question."

- Write your own under **Add a rule**, and choose which tasks it applies to.
- Rules the system suggests are approved under Research → What we learned. They are listed here so the whole rule book reads in one place.
- Retire a rule to stop it without deleting it.

Changing the structure

Press **Customise structure** to add, rename, hide or delete sections, fields and columns. These changes save at once and affect only this company.

For any field you can set:

- **Send this field to the AI**: off keeps it as a team note.
- **Only send it to**: limit it to some tasks: Idea planning, Caption & copy, Image prompts, Video & motion, Research, Ideation chat. Nothing ticked means every task. Example: a price list helps planning but is wasted in an image prompt.

Deleting a field or section hides it; the text already typed is kept in the database. Press **Done customising** when finished.

MARKETING APP TEAM GUIDE

Research

As of 15 October 2026

The research agent reads the market every Monday at 06:00 (KSA) and writes a report on what changed since last week. Open it under **Research** in the sidebar. The page has two halves: **Market research** (what is happening outside) and **What we learned** (what our own posts and decisions taught us).

Running it

- It runs on its own every Monday. To run it now, press **Run research**. It takes about 5–10 minutes; you can leave the page while it works.
- Each run is paid from the company's monthly agent budget. If the budget runs out, the report says so instead of pretending it was a quiet week.
- The cards at the top show: rules in use, suggestions waiting for review, dated actions, and how many of our posts were measured. **Holding it back** lists anything missing in setup (for example no connected account), with a link to fix it.

The report, section by section

It opens on a short **at a glance** card, then tabs with counts. Each item is a two-line title, why it matters, and what to do. Use the **For** filter to show only Business items or everything.

Section	What it tells you	What you can do
Top priorities	What most needs doing this week, most important first	Act on them
Content ideas	Gaps between what the market wants and what we say, with post ideas	Send ideas to a content plan
Website and search	How the website did on Google over the last 28 days	Open Analytics for every number
How our channels did	Our own Instagram and LinkedIn numbers	Read only
Leads, tenders and projects	Every open opening we track, not only this week's	Set a status: new, assigned, pursued, won, lost, dropped
Competitor moves	What each competitor did, and what it means for us	Read only
New competitors to review	Companies acting like competitors that we don't watch yet	**Accept** to watch, **Reject** so it is never suggested again

Section	What it tells you	What you can do
What competitors are posting	Their social activity	Read only
Events and expos	Shows where our buyers gather, next 90 days and later this year	Mark our plan: visiting, exhibiting, sponsoring, skipping
Dates to plan content around	Dated moments worth a post	Use when planning
Market and technical news	Regulations, standards, technology, giga-projects	Read; some items have a note for the technical team
Global industry	Manufacturers, prices and standards abroad, which reach us later	Read only
Smart poles	Our municipal line, kept separate because its buyer is a city	Read only
How this research went	Topics checked, what did not complete, unanswered questions, all sources	Check if something looks missing

What this adds up to writes a three-sentence summary of the whole report on request.

What the research watches

At the bottom, open **What the research watches** to steer next week's run:

- **Competitors it watches**: add one by name, add their Instagram handle, or press **Find handles**. A competitor is only measured once its handle is confirmed. Suggestions from the agent wait for you to accept or reject.
- **Standing questions**: questions asked every run so weeks stay comparable, for example "Is anyone pushing tunnel lighting?". Accept, pause or delete them.

This list belongs to the research and can differ from the competitors in the Brand Brain.

What we learned

The second half of the page. It fills from two places: the ideas you approve or reject in content plans, and the numbers from published posts.

- **What happened**: approval rate, why ideas were turned down, what people edit most, which ideas needed the most re-drafts.
- **What performed**: results by content pillar, format, weekday and platform. Until enough posts have gone out it says the sample is too small.
- **Suggested rules**: press **Run review** and the AI proposes rules from the history above. **Approve** (or edit, then **Save & approve**) and the rule starts shaping every plan and caption. Approving never changes what the Brand Brain says.
- **Rules in use**: every active rule. **Retire** stops one; **Delete** removes it.

If a suggested rule mentions a date, the page warns you: rules never expire, so a one-off belongs in a content plan instead.

Other views

- **Download PDF** opens a printable version of the report to share or save.
- **Business view** shows where we stand against competitors per business line (lighting, controls): who we compete with, who beats us in bids, what changed, and what we still can't answer. Bid results come from **Record a bid**, filled in by our own team.

MARKETING APP TEAM GUIDE

Content Planning

As of 15 October 2026

A monthly plan takes you from "what should we post?" to booked posts in four steps: **Ideas** → **Pictures** → **Captions** → **Save**. Saving books every post on Instagram and LinkedIn at its date and time (KSA). Open it under **Content Planning** in the sidebar.

The plans list

- Every monthly plan, with its approved ideas. Click one to open it where you left off.
- **New monthly plan** (or **Plan a month** on the Dashboard) starts a new one.
- **Delete** removes a plan. Any posts it already booked are cancelled first; ones that have gone out stay published.

Step 1: Ideas

1. **Pick the month.** The app lists Saudi moments that fall in it (Ramadan, Eids, Founding Day, National Day) if you tick that box. Optionally pick which days of the week you post.
2. **Add your posts.** Type each post you already know you want, for example "Announce the new Riyadh showroom opening", and pick its platform and format. The AI turns each short line into a full brief.
3. **Let the AI suggest more** (optional). Tick it, then set roughly how many, a focus for the month, focus categories (Product launch, Project showcase, Education…), and a target mix such as "40% product, 20% educational". The AI uses the Brand Brain, the latest research, past posts and approved rules.
4. Press **Create plan with AI ideas**. Writing the month takes a few minutes and runs on the server: you can close the tab. **Do not start a second plan for the same month while one is running**; both finish and both are charged.

Then review the ideas, in a **List** or **Calendar** view, filtered by All, Undecided, Approved or Rejected:

Button	What it does
Approve / Reject	Decide one idea. Add a reason when rejecting; it teaches the AI
Approve all / Reject all / Reset	Decide every idea at once
Edit	Change the wording yourself
Change with AI	Say what to change ("less salesy, about the showroom") and the AI rewrites it
Delete	Remove the idea
Suggest more with AI	Adds more ideas without repeating the existing ones; useful after rejecting some

Ideas marked **Built from an idea the research agent proposed** came from the Research page. Mix and Target show how the plan compares with the mix you asked for.

Step 2: Pictures

Press **Next — pictures**. Every approved idea needs its media:

- Pick a photo from the Brand Brain asset library, upload your own, or press to make one in the Creative Studio. A Studio picture comes straight back to this post.
- **Edit/Add images** changes the platform, format, slides and shape. Carousels can hold 2–10 slides; drag or use ‹ › to reorder.
- The fitter lets you **crop to the edges** or **show all, add a background**. "Put every other slide in this shape too" matters on Instagram, which crops a carousel to the first slide's shape.
- Text posts and polls skip this step.

Step 3: Captions

Press **Next — captions**. The AI writes three captions from each picture and its idea.

- **Pick one caption**, then edit it if you like. **Choose another** reopens the three; **Write 3 captions** asks for a fresh set; **Write my own** lets you type it.
- Check the **date and time** (KSA). An empty date is filled automatically when you save; a past date must be changed or the post won't be scheduled.
- LinkedIn polls: write the question and answers and choose how long it runs.

Step 4: Save

Press save. Each post is booked for its date and time on its platform. Anything that can't be booked waits in the **Post Queue** under Needs attention. There is no second approval. Posts that have already gone out are locked and show **View post** ↗.

Formats you can plan

Platform	Formats
Instagram	Feed image, Carousel (2–10 slides), Reel (video), Story
LinkedIn	Text post, Single image, Multi-image, Video, Poll

LinkedIn posts now publish to the company page, the same as Instagram.

MARKETING APP TEAM GUIDE

Creative Studio and Media Library

As of 15 October 2026

The Creative Studio makes pictures and videos from a description, then lets you keep talking to the result until it is right. Everything it makes uses the Brand Brain. The Media Library keeps every file the company has.

Making something

1. Open **Creative Studio**. Under **What are you making?** pick:
   - **An image**: a post, story or ad visual
   - **A video**: one clip made from a description
   - **A long video**: several shots chained and stitched into one
2. **Describe it**, for example "A dusk shot of a modern Riyadh villa facade with warm linear lighting". Pick the **Shape** (for example 4:5 for an Instagram post).
3. Optional: attach a **reference image** to take inspiration from, or a **style reference**. **Enhance** rewrites your description into a fuller one before anything is made; you see the result first and can undo it.
4. Press generate. For images you get **two options, one from each model** (ChatGPT and Gemini) to compare.

The credit figure at the top shows how much is left for making pictures and videos.

Improving the result

Each option has its own chat. Type what to change ("make the light warmer, remove the car") and a new version appears under it. Click a picture to see it full size; drag an image from one option into the other to reuse it.

On any version you can:

Button	What it does	Costs a render?
Editor	Add text, logos, shapes; crop and adjust	No
Animate	Turn the still into a video clip	Yes
Make 1080p	Sharpen a clip to 1080p without changing it	Yes
Re-render	Same settings, a fresh take	Yes
Download	Save it; it is also filed in the Media Library	No
Use this →	Turn it into a post (below)	No
Delete	Remove this version from the history	No

Video settings

- **Camera move**: presets such as Slow push in, Pull back to reveal, Rise up the facade, Lights come up, Dusk settles, or describe your own. **Strength** sets how strong: Subtle, Medium, Strong.
- **Look**: Architectural film, Golden hour, Night / dusk, Editorial product, Documentary, or none.
- **Model, length and quality**: Draft is for checking the movement; Final is for the post. The cost of each render shows before you press go.
- **Start frame / end frame**: the clip opens or lands on a chosen image.
- **Sound**: optional, and it adds to the cost on some models.

Long videos (storyboard)

Describe the opening shot, then add shots on the storyboard. Each new shot can **continue from the previous** one or be a **new shot**, joined by a **hard cut** or **crossfade**. A shared **style bible** keeps every clip looking alike. The board shows the finished length and the cost to render everything. When every clip has rendered, press **Stitch into one video**.

The editor

Free, and it never re-renders the picture or footage.

- **Text**: press T. Fonts, size, colour, shadow, highlight, spacing. Typing Arabic switches the box to right-to-left and an Arabic font on its own.
- **Elements**: shapes, arrows, stars.
- **Your logo**: the logo from the Brand Brain; **Put in corner** places it.
- **Picture**: add an image from the Brand Brain, the Media Library, this session, or upload one.
- **Crop** and **Adjust** (filters, auto-adjust, light, colour). Nothing is baked in; reopen the edit later and every setting is still there.
- **Split into layers**: each object and any painted-in text becomes its own layer you can move or delete (20–40 seconds).
- **Position**: align, layer order, even out gaps. On video, text can animate in and out.

Use this →: from picture to post

Pick the platforms, write a caption (or press **Draft it for me**), then choose:

- **Send to Post Queue**: waits there for a time
- **Schedule**: pick a date and time
- **Publish now**: goes live immediately

If you came from a content plan, Use this instead attaches the picture to the planned post and sends you back to the plan.

Chats

The left sidebar keeps every Studio session, grouped by date. **New chat** starts a fresh one; each chat can be renamed or deleted.

Media Library

Every image, video and document in the company. **Upload** by dropping files in or browsing; **Download** or **Delete** any item. Studio downloads and generated posts land here on their own. Brand photos for the AI (logos, product and project photos) live in the Brand Brain's Asset Library instead.

MARKETING APP TEAM GUIDE

Publishing and Social

As of 15 October 2026

Saved plans publish themselves. These pages are where you check what is going out, fix what failed, move dates, and make one-off posts. Instagram and LinkedIn are live; TikTok stays hidden until an account is connected.

How a post goes out

1. A post is booked when you save a plan, or when you schedule it from the composer or the Studio.
2. The booking is sent to the platform. The post then goes out on its own at its time, even if nobody has the app open.
3. The app checks the platforms every hour, marks the post Published and shows its link.
4. If booking or publishing fails, the post moves to **Needs attention** in the Post Queue, and the sidebar shows a count.

Post Queue

Every post from plans and the composer, in four tabs:

Tab	What is in it
Needs attention	Failed posts, posts with no time, and posts whose time has passed
Upcoming	Booked posts, soonest first
Published	Posts that went out, with a link
All	Everything

On each post you can **Schedule**, **Reschedule**, **Cancel schedule** (the post stays under Needs attention), edit the caption, **Finish in composer**, or **Delete**. Posts that have gone out can't be edited or deleted.

Schedule (Content Calendar)

- A **month** or **week** view of booked posts, coloured by platform. Switch with Previous / Next.
- **Drag a post** to another day or time to move it. Moving cancels the old slot and books the new one.
- Click a post to see it, change its date and time, **Edit post**, or **Cancel schedule**.
- The strip at the top holds approved posts with no time yet; open one to schedule it.
- Posts published since you last looked show in solid green. **Mark all seen** clears that.
- A warning shows when two posts to the same platform are within an hour of each other.
- **New post** opens the composer.

Social Media pages

Social Media lists each platform: Connected, Needs reconnecting or Not connected, with **Connect** or **Open**.

- **Connecting**: Instagram must be a Business or Creator account linked to a Facebook Page, one per company. LinkedIn: choose the company page (you must be an admin of it). Connecting asks you to sign in on the platform.
- **Instagram page**: a **Posts** tab (filter Total, Pending, Scheduled, Published) and an **Analytics** tab. Open any post to edit its caption and hashtags, schedule, reschedule, **Approve & publish**, save its image to the Media Library, or delete it.
- **LinkedIn page**: posts made in this app, with totals. Posts made directly on LinkedIn are counted on the Analytics page.

The composer (Create post)

Open it with **Create post** on the Dashboard, a platform page or the calendar.

1. Choose the accounts under **Publish to**, and optionally a campaign.
2. Add pictures or video (reorder, crop or remove each).
3. Caption: **Enhance with AI** (three captions written from the picture) or write it yourself. Hashtags count toward the caption limit.
4. Platform extras. Instagram: collaborators, tag people, Reel cover frame, audio track, first comment, alt text, "Made with AI" label (on by default). LinkedIn: poll question, answers and duration, link preview, first comment, alt text.
5. Optional: **Analyse this post** gives feedback on what to change before it goes out.
6. Finish with **Save as draft**, **Schedule for later** or **Post now**.

LinkedIn polls can't be edited after they are published.

Auto-replies

When someone comments a chosen word on Instagram, they get a private message automatically.

1. **New auto-reply**: give it a name (only the team sees it).
2. **Trigger words**, separated by commas, for example `catalogue, price, كتالوج`. Choose to match anywhere or only as a whole word, and whether to catch close misspellings.
3. **Never reply to comments containing** (optional), for example `job, complaint`. Checked first.
4. **The message they receive** (private), and an optional **public reply** under their comment.
5. Choose **every post** or **one specific post**. This can't be changed later.
6. Tick **Also answer people who send the word as a message** to cover direct messages.

Each auto-reply shows Triggered, Sent, Failed and People counts, and **History** lists every reply. You can pause, edit or delete it.

MARKETING APP TEAM GUIDE

Analytics

As of 15 October 2026

Analytics shows real numbers pulled from the connected accounts and the website. A number the app could not measure shows as "—", never as 0.

Using the page

- At the top, pick what to view: **Instagram**, **LinkedIn**, or **Website**.
- Pick a date range (or a custom one).
- **Refresh** asks each platform for fresh numbers. Reach and impressions can still lag the platform by up to 48 hours.
- **Performance report** opens the printable report (below).

Social numbers

Part of the page	What it shows
Straight from Instagram	Accounts reached, accounts engaged, profile link taps for the whole account (30 days at most)
Your posts, added up	Engagement rate, total followers, posts this period, best post
Engagement over time	Likes, comments, shares, saves, views, impressions, reach, clicks per day
Top performing posts	Each post with its numbers; **View** ↗ opens it on the platform
Posts per platform / Posts over time	How much we posted
Best time to post	When our posts do best
Follower history	Followers per day
Posting frequency vs engagement	Whether posting more helps or hurts
Engagement accumulation	How fast a post collects its engagement after publishing

Good to know:

- Followers are counted once a day. A newly connected account has no count until the first one, and its posts can take about 40 minutes to appear.
- Instagram gives at most 29–30 days of account numbers; LinkedIn at most 88 days. LinkedIn has no view counts.
- Posts made directly on LinkedIn or Instagram, outside the app, are counted too.

Website

Two Google sources on one tab:

- **Website search (Google Search Console)**: how we appear on Google before the click. Impressions, clicks, click rate, average position, brand vs non-brand searches, the search queries people typed, top pages, countries, devices, and indexing problems. **What to do about it** lists actions worked out from these numbers.
- **Website visits (Google Analytics 4)**: what happens after the click. Sessions, visitors, engaged visits, average visit length, where visits came from, which pages they read, key events (form sent, phone tap, catalogue download) and visits arriving from Instagram's bio link.

If a source says "Not connected yet", ask the admin.

Performance report

A printable summary for a period (last 7, 30 or 88 days): every channel side by side, and the best posts of the period ranked by interactions (likes, comments, shares and saves). Use the browser's print dialog to save it as a PDF and send it on.

MARKETING APP TEAM GUIDE

Email Flows

As of 15 October 2026

Email has two separate lanes, kept apart so a problem in one can never hurt the other:

	Newsletters	Outreach
Who gets it	People who know us or signed up: customers, partners	Prospects who don't know us yet
Looks like	A designed email, or plain text	A short personal plain email, plus follow-ups
Sent from	The newsletter sender (for example updates@email.arak-sa.com)	Our outreach mailboxes (for example sales@arak-sa.com)
Measured by	Opens, clicks, bounces, spam reports	Replies (no tracking)

The page has five tabs: **Overview, Contacts, Outreach, Newsletters, Settings**.

Overview

What is going out today, what came back, and anything that needs you. Warnings appear at the top, for example "No outreach mailbox can send". The rest shows today's numbers for each lane, the last 30 days, and recent campaigns.

Healthy numbers for newsletters: bounces under 2%, spam reports under 0.1%. Open rates run high because Apple Mail opens every email automatically, so trust clicks.

Contacts

People is everyone you can email. Filter by lane (Newsletter / Outreach), group, type and status, or search.

- **Add contact** one at a time. Notes are private; the AI reads them when writing a personal outreach email.
- **Import CSV**: export from Outlook or Excel as CSV, choose the lane, language, type and a group. **Only put people who know Arak in the Newsletter lane.** A bought or scraped list there can get the sending domain blocked in its first week; prospects go in Outreach.
- Tick contacts to act on them together: add to or move between groups, switch lane, set language, mark unsubscribed or active again, or delete.

Groups are who campaigns are sent to. **New group** makes one. Automatic groups ("Previously contacted Arak/CLB") are filled by the lead agent from enquiries; you can still add or remove people by hand.

Under Contacts you also see **leads from the research** with public contacts, ready to add to Outreach or dismiss.

Newsletters

1. **This week's AI drafts**: every Monday morning the AI writes three newsletter ideas from the Brand Brain and the week's research. **Open the draft** to start a campaign from one, **Dismiss** the rest, or **Write this week** for fresh options.
2. **New campaign**: pick the groups and language (Arabic sets right-to-left layout). Write it yourself, press **Write with AI**, or choose a drag-and-drop design template; your logo is already in. Plain text is quickest and can switch to a design later.
3. Fill in subject and preview line. Insert fields such as the first name.
4. **Send or schedule…**: send now, or schedule for a morning. Tuesday to Thursday mornings work best. Today's limit is shown before you send.

After sending, each campaign shows recipients, sent, opened, clicked, bounced and spam reports. **Duplicate** copies a campaign; **Delete** removes a draft.

Outreach

Three sub-tabs: **Campaigns**, **Mailboxes**, **Replied & signed up**.

Campaigns are a first email plus follow-ups to a group of prospects.

1. **New campaign**: pick the prospect group and which mailboxes send it (none ticked = all ready ones share the work).
2. Write the first email, or **Write with AI** (it can write one per prospect from the research). **Vary wording** and **Versions** create A/B/C versions to compare.
3. Add follow-ups, each a set number of days after the previous one. Leave the subject empty to reply in the same thread.
4. Add the **Sign-up button** if you want prospects to join the newsletter.
5. **Start sequence…**: now or on a day. Sending runs Sunday–Thursday 9:00–17:00 Riyadh, one email at a time at uneven times.

Rules that protect us: a reply stops all follow-ups to that person; anyone emailed by another outreach campaign in the last 90 days is skipped; a mailbox with bounces above 5% pauses itself. On a running campaign you can **Pause**, **Edit wording**, **Resume sending** or **Cancel the rest**. Wait for about 100 sends per version before picking a winner.

Mailboxes: connect each outreach mailbox (Microsoft 365 or Google), with a real person's name and signature. New mailboxes warm up: 5 emails a day in the first week, 10 in the second, then up to their limit. The **outreach sending switch** at the top turns all outreach on or off; it is also the emergency stop. **What goes out next** previews the next run without sending.

Replied & signed up: everyone who replied or pressed Sign-up. A reply moves the person to the Newsletter lane unless they asked to stop.

Settings

Who newsletters come from (name, address, reply-to inbox), the company address in the footer, and daily and monthly newsletter limits with a six-week warm-up. A health brake can't be switched off: newsletters

pause on their own if spam reports reach 0.3% or bounces reach 5% in a week.

MARKETING APP TEAM GUIDE

Dashboard, Assistant and Settings

As of 15 October 2026

The pages you use every day around the main cycle.

Getting in

1. Go to the app and press **Request access**. Enter your name, email and a password (8+ characters), then confirm the email link.
2. You wait on an approval screen until an admin approves you. Press **Check again** after they do; the page does not refresh by itself.
3. Once approved you see the companies the admin gave you.

Dashboard

The home page. Top buttons: **Plan a month**, **View analytics**, **View calendar**, **Create post**.

- **Numbers**: followers, reach, views and engagement across the connected accounts. Tick platforms to narrow it, pick a date range, and press **Refresh** for fresh figures.
- **Website**: how the site does on Google, with recommended fixes.
- **Needs attention**: posts made but not booked, or failed. **Open the post queue** to fix them.
- **Research**: the headline of the latest research run, dated. If a run stopped early, it says why. **Read the full research** opens the Research page.

Assistant

Ask anything about this company's data in plain words, for example "Which posts did best last month?" or "What did competitors post this week?".

- Open it from **Assistant** in the sidebar, or from any page with ⌘K.
- It answers from our own data and says when a sample is too small to mean anything.
- It can propose rules, ideas and drafts. It cannot publish or schedule anything.
- **New conversation** starts fresh; earlier chats are kept.
- The Assistant page also shows the **Weekly research** runs and a button to run research now (5–10 minutes, paid from the monthly budget).

Notifications

The bell at the top right shows app messages, such as "Brand Brain profile saved". **Clear all** empties it.

Settings (companies)

Each company has its own Brand Brain, plans, posts and numbers, seen only by the people given access to it.

- **Add company**: name it and tick who should have access.
- **Rename** or **Switch** to a company. You can also switch from the company name at the top of the sidebar.
- **Delete company** (Danger Zone) permanently removes everything in it. You need at least two companies to delete one.

Team & Access

Admins decide who can sign in and which companies each person sees. The sidebar shows a count when requests are waiting.

- **Access requests**: everyone who signs up lands here first and sees nothing until approved. **Approve** or **Deny**.
- **Add someone** clears an email in advance, before they sign up. Nothing is emailed; tell them to sign up.
- **People with access**: tick or untick companies per person; changes apply immediately. **Remove** takes all access away; nothing they made is deleted, and restoring is one click.
- Access levels: **Marketing app** (everything in their companies), **Sales** (the leads list only) and **Sales admin** (leads plus sending to Odoo).

Only the administrator can add, remove or change people. Everyone else should ask them.
